Business Problem

Client: A food network producer.

They are interested in making a reality TV series highlighting the top burgers in several cities.

They plan on doing 25 episodes, to air weekly, each one highlighting two burger joints from each city.

They are would like to focus on the top 25 cities by population in the United States.

In addition, they would like to know two nearby attractions that viewers may be interested in.

Requirements:

- Find the top 25 cities by population in the United States.
- Find latitude and longitude of each city.
- Determine top two burger joints per city
- Find two popular nearby attractions.

Data section:

Get population data from https://en.wikipedia.org/wiki/List_of_United_States_cities_by_population to create a list of top 25 cities.

Get location information from https://www.latlong.net/ for each of the cites.

Get information from https://foursquare.com/ to determine two popular bugger joints as well as popular nearby attractions.
